DETAILS, LAST PAGES.

# THE FLIPSIDE

1 Interior designer Andrea Moore created this freestanding kitchen within a warehouse space that serves as her brother's photography studio in Collingwood, Victoria. "The kitchen had to be suitable for catering and cooking demonstrations while not affecting the versatility of the space as a whole," she says. The fittings and fixtures are residential pieces that can be adapted to any home. To increase the amount of preparation space, a mobile bench with gas cooktop (not pictured) doubles as a kitchen island.

2 The compact module features separate kitchens on opposite sides of the structure; plumbing is hidden under a platform that stretches to an existing wall. The kitchen's light timber contrasts with the brick, concrete and exposed timber beams of the surrounding studio space, allowing the structure to become the focal point of the room. "I wanted it to graphically appear like a big cut-out from a solid wooden block," says Moore. A retro-look white fridge from Smeg brings a quirky appeal to the modern space.

3 White subway tiles provide a counterpoint to the kitchen's pale timber and stainless steel appliances. When the kitchen is 'open', wooden shelves show off a collection of glassware, crockery and books; when the hatch is folded down, it is transformed into a minimal birch plywood backdrop.
